

CAPUEE Final Presentation

Your Team Name

December 11, 2025

Title slide

Chapter slide

The Team

3

Present the team

- Team member 1
- Team member 2
- Team member 3

Project Description and Workflow

4

- The problem you are addressing
- Overview of the project
- Basic functioning of the load + your idea to monitor/improve/goal of your solution
- Information and data flow diagram of your prototype
- Overview of the sensors implemented

Example of the diagram (Miro or draw.io are both nice to make this diagram. Google Draw or PowerPoint are also fine)

Building the Prototype: Hardware

5

- Datasheet and description of the chosen load
- Hardware components selected
- Understanding of how the hardware works
- Sensors chosen and specifications
- ESP32 connections and pinout

Show your understanding of the hardware architecture

Building the Prototype: Software

6

- Software architecture overview (block diagrams recommended)
- Load control mechanism
- Variables being monitored
- Data granularity
- Data storage and processing strategy

Important: Code available on GitHub repository

Show what you did and demonstrate your understanding

- Benefits and savings achieved
- Key findings
- Performance metrics
- Measurements and data analysis

- What went surprisingly well?
- What did you struggle with?
- What went wrong?
 - Sensors unexpectedly breaking
 - ESP32 issues
 - Other challenges
- Bad results are still proven results
- Tested strategies and lessons learned

- Final takeaways
- Metrics summary
- Next steps
- How would you improve the prototype?
- With more time/funds, what would be different?

End slide

Thank you!
